### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Warren A. Zitlau on 03/07/05.

The application has been amended as follows:

Claims 25-26, 35, 37-38 and 43 have been canceled.

2. The following is an examiner's statement of reasons for allowance: The examiner's takes has his reasons for allowance the reasons given for patentability as set forth in sections III-IV of applicant's REMARKS found with the amendment filed 01/10/2005. The key point the examiner wants to make is that applicant's allowed claims are drawn to an aqueous fire-retardant petroleum composition that comprises a petroleum polymer initially having a hydroxyl group(s), (note: these polymers are well known in the art to be very flammable), that has been subsequently crosslinked with a diammonium salt to such an extent that the resulting crosslinked petroleum polymer is an effective flame retardant, such that when the claimed aqueous petroleum composition is applied to a surface as a coating and is subsequently dried it provides

Art Unit: 1714

fire retardant properties to the coated surface. The critical point here is that applicant's crosslinked petroleum polymers have the diammonium salt incorporated into the polymer by covalent bonds. The said polymer then crosslinks with itself or crosslinks with other petroleum polymers also containing diammonium salt incorporated into the polymer by covalent bonds. (Please see page 6, line 30 to page 7, line 17, and page 8, lines 25-31 of applicant's specification for a detailed discussion of this fact.).

All of the examiner's previously applied prior-art references differ from applicant's claimed invention in the critical respect that none of them teach nor suggest the actually incorporation of a diammonium salt into the polymer initially containing hydroxyl groups. Rather the prior-art teaches the use of diammonium salts only as crosslinking catalysts which are by nature not being covalently bonded to the polymer. Applicant's invention by using ammonium hydroxide as the catalyst species is able to actually incorporate a diammonium salt into the polymer itself by covalent bonding which is absolutely not occurring in the previously applied prior-art processes and compositions. Some of the previous applied and cited prior-art references also disclose the use of diammonium salts as conventional additives to polymer containing compositions since diammonium salts are well known, in their own right, as being highly effective flame-retardants.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
